

# EXERCISE: CREATE YOUR FIRST WORKFLOW

---

Welcome to your first exercise in n8n! You'll practice building an automation that helps you process new client requests.

## 1. Trigger: Google Sheets

Set up the workflow to start automatically whenever a new row is added to your Google Sheet.

The sheet should include: name, email, phone number, description.

## 2. Slack: Notify Your Team

Add a Slack node to send a message to your team's channel asking to handle the client's request.

The message should show:

- Name, Email, Phone number, Description

## 3. Gmail: Thank You Email to Client

Add a Gmail node to send a thank-you email to the client's email address from the sheet.

## 4. Google Contacts: Add Client

Add a Google Contacts node to create a new contact using the name, email, and phone number from your Google Sheet.
