

# EXERCISE: BACKUP SYSTEM

---

In this exercise, you'll build an automation that helps you log your files into Notion. When a new file is added to a specific Google Drive folder, your workflow will:

1. **Detect the new file** in Google Drive.
2. **Send the file's details** (name, link, and more) into your Notion database as a new entry.

This is a perfect automation to organize your files and keep a searchable list in Notion automatically.
