

10 -Lovable prompt.txt

Create an AI-powered image generator app. The interface should be clean, modern, and visually appealing. Users should be able to type in a description of the image they want and click a button to generate it.

To generate the image, send a POST request to this endpoint:
<https://your-n8n-webhook-url.com/webhook/image-gen>

The request body should look like this:

```
{  
  "prompt": "a high-resolution portrait of a man wearing a suit"  
}
```

The API will return the generated image as a binary file.
