

Web Research Agent

This **Web Research Agent** can intelligently search, extract, and summarize information from the internet - perfect for answering complex questions with real-time data.

What It Does:

-  Listens for a user query via chat input
-  Uses the **Serper API** to generate a Google search query
-  Sends that query to Google and gets real-time search results
-  Scrapes website content using a **web crawler**
-  Cleans the content, removes formatting, and feeds it to GPT-4
-  The AI agent then summarizes findings and highlights useful insights
